

## Pipe Pad Houston | GRM Custom Products

These [Pipe Pads Houston](#) are used under the joints and metals, which act as a protective layer. They help with preventing metal abrasion that can occur as a result of pipes rubbing against each other. which prevents different pipes from rubbing into each other or grinding with each other. Even a little movement of the piping system could lead to real structural damage, resulting in operational constraints. Pipe wear helps reduce friction and extends the life of the plumbing system.
