

Rise of digital freight forwarding platforms

[Digital freight platforms](#) are online infrastructures created to carry out the process of freight forwarding with added efficiency by automating various tasks of the freight forwarder. Freight forwarding is the process of connecting shippers with logistics and transportation services to initiate the process of international shipping. LOTUS Containers is a shipping container service provider that sells and leases different types of shipping containers. We offer a variety of containers ranging from dry van containers, flat rack containers, and open-top containers to reefer containers.
