

Qmoniqs software testing services in Gurugram, Delhi NCR.

Software Testing Services

VISIT US www.qmoniqs.com

So, what's this company all about?

[Qmoniqs Software Pvt. Ltd. in Gurugram](#), Delhi NCR, India is the new generation testing services company providing services ranging from offshore testing, on-site testing, exploratory testing & consulting to small, medium, and large software organizations across the globe. Qmoniqs offerings are wide enough to be brought in at any phase of the project. Be it before going to a demo at a conference, beta testing before going live or throughout the product life cycle. Qmoniqs Software testing delivers all testing services to its customers with wider and deeper test coverage.

Why do we think Qmoniqs Testing is special?

Qmoniqs belong to a significant time period in testing. It is started by those who started their career as a tester, and has remained hands & shall remain hands-on. They may hold the designation as the Director or CEO but they can test well if not great. They have at least played a small role, if not big, to stir the beginning of Renaissance in Indian Testing. They know what customers want, and they know what testers want. They are young yet experienced, with lots of energy & passion. Most important of all, they have nothing to lose, so

they can be crazy, creative, sound jazzy, and cool, and do things that other companies just aren't doing.

What do we do?

Is this page worth your time? We hope so. We are aware that it might be of good help to those who are

- * Startups
- * Niche product organizations
- * Small to Medium sized [software development organizations](#)
- * Large products & services organization
- * Software developers & testers seeking out opportunities
- * Our competitors looking at what they should do better on

Outsourced Testing Services

If you plan to outsource your testing, we can be of help to you. What we mean by "help" is that we could test your products and provide test reports with the necessary information to make better-informed decisions.

For instance, if there are 10 functional bugs with high severity, should you consider stopping the release? Should you consider fixing them all for your current release? Would it really matter to your customers? What segment of customers would be affected by these problems? What is the cost of fixing these problems versus not fixing them for a while? What risks are you taking?

These are some kinds of questions we help you answer. In other words, we facilitate the decision process without intruding into your own business decisions.

User Acceptance (Reject-acne) & Beta Testing

We are pretty good at testing that determines the worthiness of your money for the software you plan to accept. We provide test reports that help your vendor fix problems faster and determine the priority in which they should be fixed.

We have a proven track record. Above all, we love to beta-test products. You might want to consider learning the difference between getting people who love to test for your testing needs.

Exploratory Software Testing Services & Session Based Test Management

We have been practicing exploratory [software testing](#) over the years and could be considered on par (max, a little less) with some leading exploratory testers across the globe. We could help you test your software with no wasteful documentation. which gives us a whole lot of time for doing tests to increase coverage, focusing on several quality criteria. Overall giving you an additional 180 degrees view of your products.

Ask for Session-Based Test Management, if you'd like insights into what testers did every 2 hours of their work. We are specialized in performing exploratory testing from freestyle to checklists to loosely scripted contexts.

Check (Test) Automation & Test Data / Test Design Automation

Thankfully, for you, we have automated checks in the past. We have taken special care about our education in automation to help you prevent being fooled by numbers. We'd like to tell you the story behind those numbers.

We believe in not automating things that are not supposed to be automated. That helps us learn what needs to be automated and how they need to be done. We don't have magical ROI calculators but we do ask one question for everything you'd like to be automated: what is the cost versus value?

Consulting & Training

We are open to helping you learn how has your progress been. You may be doing very well but unless you know that, you may not feel good about continuing to do good. If you are doing badly, our consultants would help you not continue with that. The next time, you'd like an assessment of your product, productivity, test coverage, strategies, plan, executing testing work, or get your teams trained on stuff that can make them more valuable to you, just remind yourself of having read these sentences on our website.
