

Accessibility Check

Web Accessibility Check

As you probably know like PDF accessibility and PDF remediation, web accessibility evaluation is needed by every website owner, and the main goal is for that website to automatically be accessible and user-friendly to people with disabilities!

If you want to make sure that your website meets certain web accessibility standards, looking for a web [Accessibility Check](#) feature is usually a good place to start. As you may know, website accessibility is a set that includes website usability, which basically means that besides accessibility evaluation, your website needs to be usable, too!

If you do a Google search for “web content accessibility tools” you will likely see a lot of results and plenty of useful tools you can use. In today’s article, we are covering some of the tools that are commonly used for an accessibility check – and what you need to know before using each testing tool!

How Do These Tools Conform To The Web Content Accessibility Guidelines?

Below, we will be listing some of the best web page accessibility tools. You should keep in mind that all of them are used to evaluate your website against accessibility guidelines (including the WCAG 1.0, Section 508, RGAA in France, Stanca Act in Italy, etc.) through scans. Most of them are tools that can be opened as URLs in a browser, but some of them allow you to upload your HTML file or pass your HTML code. These are not web browser plugins, though – they work without downloading or installing anything to use them!

What's The Best Web Accessibility Checker?

Here is the list of website accessibility evaluation tools that can help you scan and detect any potential accessibility issues and give you a detailed accessibility check with information on potential broken links, errors, information mishaps, contrast issues, and more on each of your pages!

- [Accessibility Checker by Intent-Based](#)
- [AChecker – Accessibility Checker](#)
- [Cynthia Says](#)
- [FAE – Functional Accessibility Evaluator](#)
- [WAVE – Web Accessibility Versatile Evaluator](#)

We hope that this group of tools helped you identify some background accessibility issues in your image files, code, app, or business website. Continuous monitoring and running of tests in the background is the only way to ensure full compliance on every page!

PDF accessibility is also important as web accessibility and can't be ignored to help people with disabilities and to avoid any legal issues. Browse our website for details or contact us if you need services for PDF document accessibility and PDF document remediation!
