

FP Centrifugal Pump

Fristam FP pumps are designed with open impellers as well as with narrow gaps between the impellers and the cover. Combined with the flow-optimised pumping channel, these ensure minimal secondary flow, very gentle product handling even at high volumetric flows, and energy-saving operation. The FPs' design makes them ideal for hygienic applications. The pumped medium may be homogenous or contain air, gases or suspended solids.

Leading [sanitary processing pumps manufacturer in India](#), delivering top-quality solutions for diverse industries.
