

# Structural BIM Services | Building Information Modelling – USA

Building Information Modelling

## Structural BIM Services

Structural BIM Services involves the design and detailing of structural elements such as beams, columns, anchors, frames, and joists. Building Information Modeling offers complete structural CAD services to speed detailed design study and evaluation of the building structure. Our BIM models for structural designs ensure that the structure is strong and durable. We provide 3D, 4D, and 5D BIM models with accuracy ranging from 100 to 500 LOD.
