

Csmart's Quick Launch Solution: New MVNO in Europe in 100 Days

About Client: Our client, a key player in the German telecommunications market, offers advanced IoT & 5G solutions to corporations and MVNE services to telecoms of all sizes.

Objective: They aim to create a fully managed multi-tenant MVNE platform and provide it as a SaaS model to offer scalable MVNE services, enabling MVNOs to launch mobile brands with minimal upfront costs.

Centralized Identity Management: Centralized identity management has been enabled to enhance the user experience. This feature allows users to manage their identities and access controls from a single, centralized platform.

Comprehensive Contract Management: We have developed a comprehensive contract management module capable of handling highly complex and customized contracts. This ensures that all contractual obligations are met and that MVNOs can focus on their core business operations.
