Pay Only for What You Need

Work-tops offer Obsidian slab sizes in various dimensions to suit different requirements. You thus pay for only that size which is required.

The sizes available in Work-tops are:

1. 3050mm x 1440mm
2. 3060mm x 1440mm
3. 3070mm x 1440mm

Design Unique Style Kitchens

Our slabs are available in 2 different finishes: Glace Finished and Polished Finish

Polished finish for worktops is one of the most preferred types but also the most common. If you want something unique for your kitchen and other surfaces, choose our Glace finished slabs, like Volcano Light Obsidiana for kitchen worktops, walls, floors, and splashbacks.

Modern Kitchen Worktop or Traditional?

We at Work-tops offer Volcano Light Obsidiana slabs in 3 different thicknesses that are 12mm, 20mm, and 30mm. This creates an opportunity for homeowners to modify their space into either a contemporary one or a traditional one, as it pleases them.

- **12mm Slabs Best for Super Sleek Modern Kitchen Vibe**

12mm Volcano Light Obsidiana slabs are the ideal options because the key characteristics of modern kitchens are sleek and streamlined. The fact that 12 mm are thinner than 20 mm and 30 mm Obsidian slabs, respectively, should go without saying. Although thinner slabs are similarly attractive and have a similar visual appeal to thicker slabs, they are more prone to fractures, flaking, and scratches. Therefore, it is advisable to use 12mm of obsidian for coating walls and cabinets. This is due to the fact that walls do not require large holes, such as those required for sinks, cooktops, or shower surfaces, as thin obsidian is more prone to breaking when creating those types of apertures.

- **Fans of Contemporary Kitchen Can Also Choose 20mm Slabs**

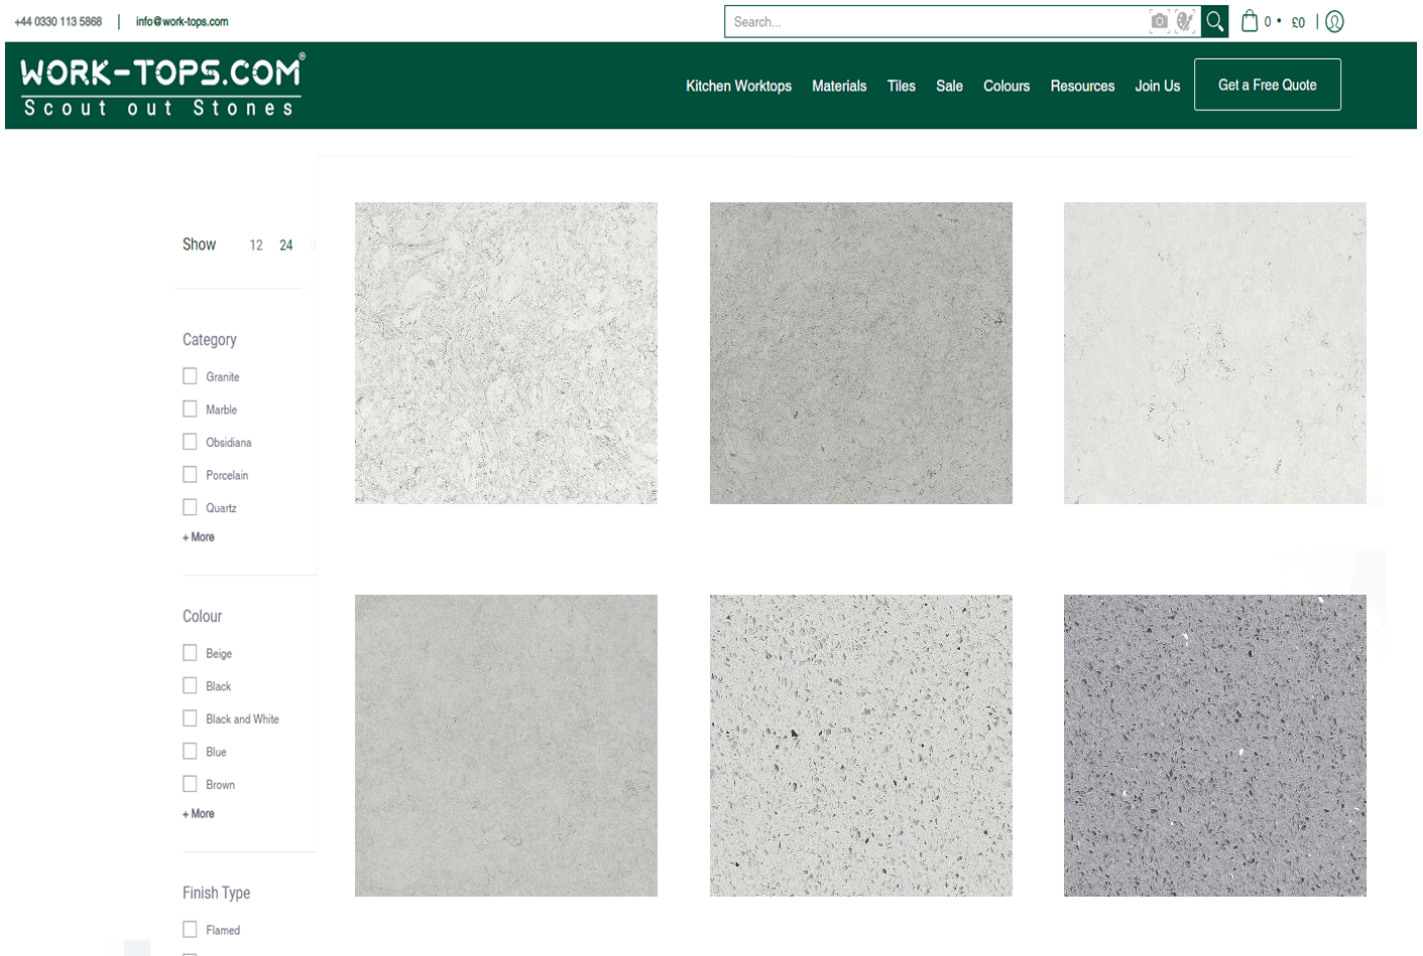

Similar to how obsidian countertops constructed of 20 mm slabs are visibly thinner than 30 mm slabs, these slabs are not only more affordable than 30 mm Obsidian slabs since they take less material to make, but they are also the most adjustable thickness in terms of design. This

is due to the fact that worktops and backsplashes may be placed using only one sheet and in the same width, thus increasing the value of any property.

- **Fans of Country Kitchen Choose 30mm Slabs or Thicker**

Experts in the field claim that 30 mm thick Obsidian slabs offer long-term advantages in terms of initial setup and endurance compared to thinner slabs. Traditional style kitchens have details and feature chunky widths. So 30mm and above thicknesses are perfect if you are wanting to build something with a rustic country vibe.
