I worked in the Power Industry in the 1990's. I saw how the power companies are making their power grids more energy efficient. I wondered, "If they can make their power grids more efficient, can their customers make their homes/businesses more energy efficient too?" After years of research & testing, the answer was yes!

How much could the average home or business owner save every month? I was determined to find out. I installed our products on every family member, neighbor, friend, and friends of friends across the country to find out.

While the average reported back to me was 10-15%, some reported back savings of 22%, 26%, and even 35%! After discovering that the US Dept. of Energy reports BILLIONS are billed to the American consumer without them even benefiting from it, I knew something must be done to help. From Our Customer Reviews we've gotten back, we are happy to report that we are helping hundreds of thousands of homeowners and business owners alike all over the WORLD save on electricity bills.

Our manufacturing business is family owned and operated located in O'Brien, FL USA (about 1 hour northwest of Gainesville, FL, and the University of Florida). We want to help EVERY family and business worldwide save money on their power bills and thus live a better life.
