

## HCL Software's Streamlined Domino Licensing and Introduction of Domino CCB Model

HCL Software has streamlined its Domino licensing, introducing the Domino Complete Collaboration (CCB) model, per-user licensing system. It comprises the HCL Domino Complete Collaboration Business Edition (CCB) for B2E and B2C users and the HCL Domino Complete Collaboration eXternal User (CCX) for B2B users. They have also unveiled HCL Volt MX Go, which empowers customers to leverage Domino's features for [rapid application development](#). It's recommended that customers transition to either Domino CCB or Volt MX Go licensing and upgrade to Domino version 12.0.2 for access to new features.

CCB simplifies Domino licensing, replacing the outdated Processor Value Unit model, offering transparent compliance management, and supporting future-proof licenses. CCX caters to external B2B or B2C users. This enhances user flexibility and licensing efficiency.
