*** Grid Repair Towns ***

- [Get PDF of this site](#)

Intense Footage of Fake Towns Used for 1950s Nuclear Tests

Like a "Doom Town" in reverse.

Self-Sufficient

Capable of obtaining

Their own water

Their own food.

Their own materials.

Their own Steel.

Their own Copper.

Their own Semiconductors.

Their own Fiber-Optics

Their own Machining.

Their own Electrical Generation.

Their own chip fabrication.

Their own economy.

Their own transportation.

Their own Railroad

Their own Rail Foundry

Their own Locomotive Plant

Their own Coal Supply.

Their own Coal/Steam Locomotives.

Their own food canning.

Their own Smartphone plant.

(Canned Smartphones...?)

Like a Mars Colony.

For when Earth becomes Mars.

PS: Download and share the AudioEd

And the PDF of this file.

**Download my 00Cedar software
and get it running under Dosbox
on your phone
or desktop or tablet or Mac
or powerDOS iPhone...**

BEFORE you NEED IT.

PS.

**There is talk of burying power lines as a
solution...**

**We have 200,000 miles of
High Voltage Transmission Lines
in the U.S.**

With 5.5 Million Local Distribution Lines...

**Burying Power lines costs
a million dollars per mile...**

**If all the HVAC were buried,
that would cost**

200 Trillion Dollars.

So...

Repair Cities are Vital.
