

# Tips To Prevent Foundation Damage

Concrete foundations are built to last for decades, but just like the rest of the home, they must be protected from the elements. The best way to protect your concrete foundation from damage is to identify and address any potential issues before they become problems. Here are some [tips to prevent foundation damage](#).

# TIPS TO PREVENT FOUNDATION DAMAGE

## ENSURE PROPER DRAINAGE

Drainage can be done by enhancing the ground slope around the perimeter of the house.

## MAINTAIN YOUR PROPERTY

Keep branches, rocks, and other debris that can trap water away from your home's foundation.

## WATERPROOF YOUR FOUNDATION

The best way to waterproof your foundation is to install a rain screen that drains water away from the main drainage system.

## REPAIR CRACKS AND HOLES

Regular inspection of your foundation for holes and cracks proves to be vital for preventing

damage.

## **FIX WALL CRACKS AND GAPS**

Another issue that causes rainwater to drain down to the foundation is a crack in an exterior wall. Which must be repaired immediately.
