

# What's Coming in Orangescrum: Q4 Feature Roadmap for Cloud & Self-Hosted

As businesses grow in size and complexity, project management solutions need to evolve to support organizational scalability, enhanced team collaboration, and process optimization.

Orangescrum's Q4 feature release focuses on empowering businesses with robust tools to manage their teams, projects, and resources more effectively, ensuring seamless project execution across departments and locations.

In this feature release, Orangescrum introduces seven key enhancements that aim to drive productivity, improve reporting, and align your organization's goals with every task and project.

1. Organization Hierarchy
2. Business Unit Management
3. Program Portfolio Management
4. Test Case Management

5. Custom Dashboard and Report Module
6. Mapping Epic to Initiatives and Features in Agile Project Management
7. Introducing Dewey Decimal Format for Viewing Tasks and Sub-Tasks

Let's dive into the details of each of the features. Each of these enhancements will elevate your project management experience, ensuring your team remains agile and aligned with your organizational objectives.
