Is it simpler to sail a catamaran?

The difficulties of sailing a monohull come from the vessel's tendency to heel and the greater confines of its interior. Stronger winds cause monohulls to heel, making it more challenging to do just about anything. Sailing aboard a heeling boat is more difficult in all aspects of sailing, including going forward to reef, trying to winch in a sail, and moving around the boat. The increased stability and spacious interior of a catamaran makes getting about the boat and avoiding the dreaded heel a breeze. This is why many people consider catamarans "easier" to sail than monohulls.

You may still be on the fence about whether or not to rent a private boat for your upcoming vacation, so we have provided you with a list of the most convincing reasons why you should make that decision.
