

# Make Cleanup Easy: Tips for Maintaining Waterproof Hybrid Vinyl Flooring

Installing waterproof hybrid vinyl flooring in your home is a great way to achieve style and durability. However, it requires some special care and attention, both in cleaning and maintenance.

Fortunately, taking care of your [waterproof hybrid vinyl flooring](#) doesn't have to be complicated; read on for our top tips on keeping your floors looking their best.

## Regularly Sweep or Vacuum

- Like any other type of floor, the best way to keep your waterproof hybrid vinyl flooring looking good is to sweep or vacuum it regularly.
- This will help prevent the build-up of dirt and debris that can dull its appearance over time.
- Make sure you use a soft-bristled broom or an attachment designed specifically for hard surfaces when sweeping, as this will ensure that you don't scratch the surface of your floor.

## Dry Mop Regularly

- In addition to sweeping or vacuuming regularly, you should also dry-mop your waterproof hybrid vinyl flooring weekly (or more often if needed).
- This will help eliminate dust and other particles that have become lodged between the boards,

ensuring that your floors look their best.

- Also, make sure that you use a soft mop with non-abrasive fibres – microfiber is ideal – so as not to scratch or damage the surface.

Taking care of your waterproof hybrid vinyl flooring can be easy with just a few simple steps! Regular sweeping and vacuuming combined with dry mopping and prompt spill clean-up are all you need to maintain your beautiful floors and keep them looking their best for years to come.
