

Infera Designed to Address the Health Systems Challenges You Face

Claims files are uploaded into Claims Assistant via a web interface, after which the data is mapped by our team in a one-time process. With a few clicks, claims are extracted and intelligent rules are applied to the data. Within seconds the output is displayed in an easy-to-read format. Output can be filtered in multiple ways and maybe be printed or exported to a spreadsheet. EMRs and clinical management software, though often maligned by clinicians, are a critical part of the solution, but they have their limitations. While EMRs excel at centralizing patient data and enabling workflow tasks, they don't provide the kind of clinical knowledge and data interpretation assistance clinicians often need to better manage patients.
