

What is Glutathione Therapy?

Glutathione therapy is a medical treatment that involves the administration of glutathione, a naturally occurring antioxidant, to help treat various medical conditions. Glutathione is produced by the liver and plays an important role in protecting the body from damage caused by free radicals and other harmful substances.

In glutathione therapy, the glutathione is typically administered via injection or intravenous infusion. The treatment has been used to help treat a range of medical conditions, including liver disease, Parkinson's disease, and some types of cancer.

In addition to its medical uses, glutathione therapy has also become popular as a cosmetic treatment to lighten the skin. Check out Revital Trichology to know more [Glutathione Therapy](#).
