

# Baby Pigeons: Everything You Need to Know

Ever wondered about [baby pigeons](#)? 🐦 Here's a peek into their world:

1. **Appearance:** Baby pigeons, called squabs, are initially pink and naked. Over time, they develop feathers, starting with a fluffy down.

2. **Nesting:** Pigeons build simple nests using twigs, leaves, and other materials, often in urban nooks like window ledges or rooftops.
3. **Feeding:** Squabs are fed a special "pigeon milk," a nutritious secretion produced in their parents' crops. This milk is rich in fats and proteins crucial for their growth.
4. **Growth:** They grow rapidly, doubling in size within a week or so. As they mature, their feathers start to come in, and their beaks become more prominent. Understanding baby pigeons offers a glimpse into the resilience and resourcefulness of these urban avian residents
