The Role of the Scrum Master

The Scrum Master is often referred to as the "coach" or "guide" of an agile team. Their primary responsibility is to ensure the Scrum process is being followed, but this role goes far beyond simply adhering to processes. A Scrum Master's mission is to create an environment that allows teams to flourish, remove obstacles that may hinder progress, and continuously improve the team's performance.

A Scrum Master works closely with both the development team and the Product Owner. They ensure that the team is self-organizing and can focus on delivering high-quality, valuable work. This involves facilitating Scrum ceremonies such as daily stand-ups, sprint planning, sprint reviews, and retrospectives, while also helping to manage the flow of work and removing any blockers that may arise during [Scrum Master Certification Online](#)
