How does Covid-19 PCR testing work?

Most COVID-19 diagnoses are based on PCR tests. The PCR tests are very accurate because they can detect tiny amounts of virus in a patient's sample. Covid testing took a few days initially, but now rapid PCR tests are approved that give results in 24hrs-48hrs because the virus has surged.

COVID-19 Symptoms:

Temperature above 37°C, sweating, shivering, etc.

Coughing, gruffiness, nasal release, sore throat, gasping, sneezing
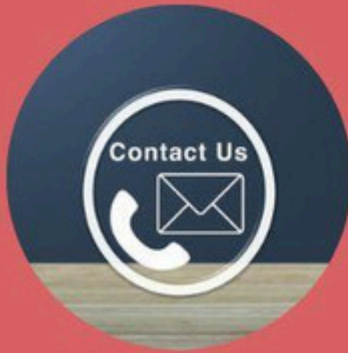

Headache and loss of smell

is known for providing quality healthcare in a convenient manner, especially for Covid testing, in the UK.
