

How to Uninstall Kaspersky on Mac?

Do you want to uninstall Kaspersky on Mac? Kaspersky is a famous security product that provides impressive protection for both computers and smartphones. Also, the product runs smoothly with all the compatible devices. But, in some situations, you may face problems, and due to that, you might want to uninstall the product. If you want to understand the proper steps of how to uninstall Kaspersky on Mac, then you can follow the following procedure.

- For the first step, you need to open the Kaspersky program from the Applications menu.

- Or you can click on the Kaspersky icon on the desktop and click on Kaspersky Internet Security.
- After that, move to the top right side of the screen, click Help, and choose the Support option.
- When a new pop-up window appears on the screen, then choose Uninstall to initiate the process.
- If another screen appears asking if you want to uninstall the Kaspersky program from your device, then choose Uninstall.
- After that, enter your password and then select the OK button to start the product uninstallation.
- When the uninstallation is completed successfully, a notification will appear on the screen. Then, select the Quit option.
- Now, the Kaspersky antivirus program will be removed from your device.

If you follow every step of this guide carefully, then you will be able to complete the Kaspersky uninstallation process without any hassle. If you encounter any error while performing the product uninstallation, then it is best to seek additional help. For more information visit our website or the link provided below.
