One of the most popular candle waxes, paraffin wax, is produced differently because it is less expensive. Paraffin wax is the end product of the purification of oil from petroleum, coal, or oil shale. The by-product of removing the waxy component from crude oil is paraffin wax. Additionally, people are putting their health at risk without even realizing it. Chemicals released by paraffin candles, which are the same toxins found in diesel fuel fumes, have been linked to lung cancer and asthma.

Soy wax is produced from resources that are environmentally friendly and renewable, as opposed to conventional paraffin wax, which is traditionally made from petroleum and is not

renewable. They have a calming effect on your room and add to the beauty of your home because they are made of herbal ingredients and fragrance oil.
