Do you require the Surat IVF [Center and Fertility Clinic?](#) IVF Center may be the best choice. Drs. Vishwa Chavda, Kahan Chavda, D.A. Chavda, and Viral Modi are some of the most highly regarded gynaecologists in [Surat](#), Gujarat. The female reproductive system, which includes the vulva, vagina, uterus (womb), and ovaries, is a gynecologist's field of expertise.

Knowing the cause

Understanding the causes of infertility will help you select the best course of action. Women's infertility can result from a variety of structural issues, such as a blockage in the Fallopian tubes or a deformity in the cervical canal. It might also be brought on by polyps or fibroid. A hormonal imbalance that can cause ovulation issues is one of the most frequent causes of infertility.

[Infertility](#) in men can have a wide range of causes. This may happen as a result of hormonal, anatomical, lifestyle, or psychological issues. Even with the most up-to-date inquiry techniques, it becomes difficult to pinpoint the true cause of infertility in roughly 20% of cases.

Many couples avoid going to a hospital to talk about their problems. It's critical to realise that more than 15% of couples experience difficulties during the conception process. Infertility is a problem that many people face today since both men and women put off having children in order to pursue other aspirations. The good news is that IVF clinic professionals are always willing to assist such couples and are honest with them about their problems.

But how can you tell when it's time to move on and go to a fertility clinic? Let's attempt to comprehend this in more detail. According to medical definitions, infertility is a condition where a couple is unable to conceive after engaging in unprotected sexual activity for more than a year. In situations where the lady is older than 35, this time frame is shortened to 6 months. You should therefore proceed at that point and go to a Surat fertility hospital.

Nonetheless, more than 80% of patients who are under 35 years old conceive within two years after beginning treatment. There is no need to wait a long time to fulfil your desire of beginning a family, while every couple has their own timeline. There are a number of indicators and symptoms that couples should watch out for that would suggest an earlier trip to a reproductive clinic in Kondapur.

a. Irregular cycles of menstruation

If your cycle is erratic and you are having no luck with the ovulation kits or apps, you might wish to make an early appointment at the clinic. A fertility specialist can perform a test on you and assist with cycle monitoring and ovulation testing.

b. Premature menopause

Several factors can lead to early menopause, which can occur in some women as early as 40 years of age. Ovarian and menopausal disorders can run in families, and those with such a history may have early menopause themselves.

c. Familial infertility

Both men and women may relate to this. Early examination is advised if any of your ancestors or other family members have struggled with infertility or miscarriages.

d. Genetic problems

Many illnesses are inherited from one generation to the next. You must attend the IVF clinic in Srinagar Colony right away if you have a family history of more than a few members having a particular genetic condition and your attempts to conceive have been unsuccessful.
