Stonika Collection Unique Features:

Design for Hyperrealism

Unlike other surfaces, Helena 22 Stonika Dekton technology does not require the application of a thick vitreous coating. As a result, the image is not warped, allowing for more design clarity and realism.

Scratch and Thermal Resistance

Because [Dekton Slab](#) has the same scratch resistance as other polished hues. Because of the differential in expansions between the two elements, the base and surface react to changes in temperature, in the same way, avoiding typical cracks.

Sublime Edge

Helena 22 Stonika Dekton is designed as a one-of-a-kind sculpture, unlike other goods with a glassy coating. Because of its thickness, its surface is now almost unnoticeable. It is the thinnest on the market and precisely combines with the foundation to create a single, more compact, and robust material.

Does Dekton Slab the Right Choice for Your Kitchen?

Dekton worktops will make an excellent addition to your house or office.

Selecting the proper materials for a kitchen worktop necessitates careful thought and preparation. Although some homeowners prefer to stick with traditional worktop materials like granite, marble, and limestone, others prefer to keep an eye on new market possibilities. If you fall into the latter category, you'll be pleased to know that Cosentino, the world's leading quartz brand, now provides a new kind of sintering stone worktop surface called Dekton. Dekton worktops are constructed from several raw materials, including natural quartz, porcelain, and glass. Dekton offers the finest quality countertop surfaces for kitchens with this goal in mind.

Dekton's DNA and structure allow it to be readily converted onto tiles, tile floors, external cladding, and more.

The beauty and unique performance attributes of Dekton set it apart from other man-made materials, such as quartz. Not only may these surfaces be used in interior design, but they can also be used outside. Furthermore, Dekton is very heat resistant (it can endure up to 300 degrees Celsius against 150 degrees Celsius for quartz stone) and can withstand cold temperatures. To top everything off, Dekton worktops come in various realistic finishes, including marble-like and concrete-effect countertops. Furthermore, this is a highly adaptable substance. The brand provides the thickness of 4 mm, 8 mm, 12 mm, and 20mm.

Unique Benefits of Dekton Surfaces:

Appropriate for Both Indoor and Outdoor Use

Dekton countertops are used in various indoor applications such as countertop surfaces, wall tiles, floor tiles, etc. However, unlike other materials that are not appropriate for outside usage, the Dekton surface can be utilized for outdoor purposes.

They are Highly UV Resistant

Dekton surfaces, unlike other countertop materials, are very resistant to UV rays from the sun. This allows them to keep their colour for a more extended period without fading. As a result, Dekton surfaces can be utilized indoors and outdoors under direct sun without difficulty.

They are Highly Scratch Resistant

Dekton worktops are highly resistant to scratches caused by household items. It is recommended to utilize chopping boards while cutting veggies and other items.

They are Abrasion Resistant

As compared to granite, Dekton is much more abrasion-resistant. This makes it an excellent choice for commercial applications and various aspects of the home, such as facades and flooring. Unlike other substances, which will exhibit indications of wear and use over time, Dekton has a finish that will let it preserve its almost everlasting look without the requirement for repacking or polishing.

They are Stain-Resistant

Dekton countertops have minimal porosity, which means they are resistant to stains in both household and commercial kitchens. Dekton is also stain resistant to chemical treatments. A moist cloth may readily remove stains created by everyday objects such as coffee, wine, ink, and rust.

Dekton Maintenance and Care:

Dekton worktops are now almost entirely non-porous, making them highly resistant to stains. However, washing these worktops daily with a balanced ph soap and water is still a great idea. You can clean it with a sponge made of soft fibers.

Unlike many other materials, no protection is required when laying heated objects on the worktop. Because Dekton is made at such high temperatures, you will only need protection once your surface is much less than 8mm thick; moreover, there is no harm in covering it anyhow.

Dekton is durable and should not be damaged, burned, or soiled. You won't have to do anything else but clean your worktop daily and remove stains as needed. Most worktops require sealing, but Dekton does not because of the way it is made.
