

# A comparison - Ankovo and Braun Forehead Thermometer

It's incredibly important to have a reliable, high-quality thermometer. That's why it's a MUST to carefully consider your choice of thermometer for your family.

Let's look at two brands of thermometers, Ankovo and Braun. At first glance, both are quite similar in its characteristics: they are both forehead thermometers, and have a similar look and feel. We'll compare these two brands based on their accuracy, price, and other important features to see how they differ from each other.

## Ankovo Forehead Thermometer

**Accuracy:** Ankovo's thermometer has an accuracy of  $\pm 0.2^{\circ}\text{C}/\pm 0.4^{\circ}\text{F}$ , which is a normal accuracy standard for forehead thermometers. It uses hi-tech infrared technology to read your body temperature in less than one second (one of the fastest on the market!) in both forehead and in-ear mode. Ankovo also stores a maximum of 20 previous readings to track the changes in your body temperature.

**Price:** USD 19.99 (USD 12.16 on [Amazrock](#))

**Notable features:** Ankovo forehead thermometers have an inbuilt fever alarm that alerts the user of a fever (temperature exceeding  $37.5^{\circ}\text{C}/99.5^{\circ}\text{F}$ ) with 7 rapid short rings and its LCD screen blinking red. It also has a low battery indicator that warns you ahead of time when you

need to change the battery. Ankovo thermometers can display readings in both Fahrenheit and Celsius.

## Braun Forehead Thermometer

**Accuracy:** Like Ankovo, Braun's thermometers have an accuracy of  $\pm 0.2^{\circ}\text{C}/\pm 0.4^{\circ}\text{F}$ , and uses infrared technology to read temperatures within seconds. Braun Forehead Thermometers measure temperatures both on the forehead and in the ear. They can provide a maximum of 2

previous readings at a time that can help you keep track of changes in body temperature. However, do note that Braun thermometers can only read in Fahrenheit, not Celsius.

**Price:** USD 84.99 ([Amazon](#))

**Notable features:** You must use disposable lens filters for the thermometer to work, which is great for hygiene! These disposable lens filters are inexpensive as well, so you need not worry much about the cost. The Braun BFH-125 Forehead thermometer has color codes for the different temperature ranges -- green indicating no fever, yellow indicating a slight fever, and red indicating a high fever.

## Ankovo or Braun?

After looking at the differences between these two brands, which would you pick? In terms of accuracy, both are considerably similar -- The difference is in their price and other features. Personally, I would choose Ankovo forehead thermometers, as for a price 60 dollars cheaper than Braun, you get the same degree of accuracy and high performance!

Do you agree with me? Let me know in the comments below!
