

Antimicrobial resistance (AMR)

Antimicrobial resistance, [#AMR](#) is an emerging silent pandemic, endangering both animals and humans. By 2050, it's projected to be the leading cause of death worldwide resulting in a loss equivalent to USD 13 billion in livestock and USD 3 billion in aquaculture according to a report published by World Economic Forum.

Our [#integratedapproach](#) combines a feed-farm-health approach to reduce dependency on antibiotics through small steps that together lead to big change.

To make a small switch for a big change, click here: <https://brnw.ch/21wJgMS>
