Introduction

An inguinal hernia occurs when tissue, such as part of the intestine, protrudes through a weak spot in the abdominal muscles, causing pain and discomfort. If left untreated, it can lead to complications like strangulation. At [TX Hospitals](#), we offer [inguinal hernia surgery in Hyderabad](#), ensuring safe, effective, and minimally invasive treatment for long-term relief.

When is Surgery Needed?

Surgery is recommended when:

- The hernia grows in size or becomes painful
- There is difficulty in performing daily activities
- You experience nausea, vomiting, or bowel obstruction
- The hernia becomes trapped, leading to reduced blood supply

Advanced Surgical Options at TX Hospitals

We offer both **open surgery** and **laparoscopic hernia repair**, depending on the severity of the condition:

- **Laparoscopic Hernia Repair** – A minimally invasive approach with smaller incisions, less pain, and quicker recovery.
- **Open Hernia Repair** – A traditional method suitable for larger or complicated hernias, ensuring a strong repair.

Why Choose TX Hospitals?

- **Expert hernia surgeons** with years of experience
- **Advanced surgical techniques** for better recovery
- **Minimal hospital stay** and reduced post-operative discomfort
- **Comprehensive post-surgical care** for long-term relief
