

What is the Difference Between Primavera Cloud and Primavera P6?

Primavera Cloud and [Primavera P6](#) are both project management tools developed by Oracle, but they serve different purposes. Here are some key differences:

- Primavera Cloud is cloud-based, while Primavera P6 is a desktop application.
- Primavera Cloud can be accessed from any device with an internet connection, while Primavera P6 requires local installation.
- Primavera Cloud is designed for collaborative project management across teams. It offers real-time updates, dashboards, and a user-friendly interface, making it ideal for distributed teams. On the other hand, Primavera P6 is known for its robustness and advanced scheduling features. It's highly favored in industries like construction and engineering for its ability to handle complex, large-scale projects.
- Primavera Cloud excels in accessibility and modern collaboration, while Primavera P6 remains a go-to for detailed scheduling and resource management.

- Primavera Cloud is typically subscription-based, while Primavera P6 uses a perpetual license model.

If you want to learn more about these two and want to access them, connect with Global PM today. Here, you can access [Primavera training](#) and discounted licenses.
