

Biometric Attendance Machine in UAE | Microhard Infotech LLC

The UAE is a country that has been in the limelight for the biometric identification systems that have been implemented in recent years. The UAE has a population of over 9 million people, and it is estimated that the number will double by 2030. It is also considered one of the most technologically advanced countries in the region.

With such rapid development, biometrics has become an essential part of everyday life in the UAE. It has been used by government agencies to verify identity and access to government services and private companies to identify employees and individuals for tracking purposes.

Attendance Punching Machines are used to identify people, verify identities, and ensure security. Biometrics are also used as a tool for law enforcement agencies to stop crime.

How to Get an Accurate and Fast Entry of Your Employees at Their Workplace with the Use of a Biometric Attendance Machine

The **Attendance Biometrics Machine** is a device that can scan and identify employees from their fingerprints, iris, or facial features. It is used to ensure that the employees are present at work and working.

Microhard Infotech's Biometric attendance machines are designed to be accurate and fast. They have sensors that can scan people's fingerprints, irises, or facial features. This enables them to recognize the employee with just one touch of a button, and it only takes seconds for the system to read it.

Understanding Biometrics in UAE

In the UAE, there are two main types of **attendance biometric machines**: the fingerprint scanner and the iris scanner. Microhard Infotech machines have been implemented in many companies in order to improve their efficiency and reduce staff turnover, which is a common problem in the UAE. The fingerprint scanners work by scanning your fingerprints and matching them with a database, whereas the iris scanners work by scanning your eyes and matching them with a database.

What Does the New Biometric System in UAE Mean?

The new biometric system in UAE means that the government is trying to make a significant change in the way they collect information. The **biometric attendance system in Dubai** will be used to collect data on people and their habits, which will then be used for a wide range of purposes, such as improving public safety and national security, ensuring the welfare of citizens, and managing social programs. The new system has been implemented by Abu Dhabi's Department of Economic Development (DED), which is the first government organization in Abu Dhabi to use biometrics.

Microhard Infotech's Biometric Attendance System Dubai has the ability to track when people come into work and leave work. This means that managers can make sure that employees are not taking too many breaks throughout the day and staying on schedule with their tasks. These systems also provide an easy way to check if people are staying on schedule by looking at their activity log throughout the day.
