

# Dasher - In-House Smart Delivery Robot

Dasher is a compact autonomous robot designed to navigate through busy environments while delivering items with ease. It can be used to deliver food orders, packages, documents, and other items, reducing human-to-human contact and ensuring a fast and hygienic delivery process. Kody Robots, powered by Kody Technolab, is an innovator in the robotics industry, specializing in surveillance, cleaning, and in-house delivery robots.

**Dasher** is equipped with advanced sensors and cameras that allow it to map out its surroundings and safely navigate through dynamic environments. It can effectively avoid obstacles and adapt to changes in its route, making it the perfect option for busy offices or crowded hospital hallways. With a top speed of 5 miles per hour, Dasher can quickly move through its designated area, minimizing wait times for deliveries. Kody Technolab is an end-to-end Robotics Service provider, and they provide expertise in a wide range of robotics solutions, including industrial automation, collaborative robots (cobots), autonomous mobile robots.

One of the standout features of Dasher is its ability to communicate with elevators. This allows it to independently navigate through multi-story buildings, making it

efficient for deliveries to different floors. Dasher also comes equipped with a temperature-controlled compartment, ensuring that food stays fresh and hot during delivery. The robot's size also allows it to fit through standard doorways and hallways, making it versatile for use in different types of environments. Kody Technolab provides custom robotics systems for specific applications and industries, including mechanical designing, software development, sensor integrations, and training.

Dasher is also designed to be user-friendly and easy to operate. Businesses can easily integrate this robot into their existing system, allowing for seamless and efficient delivery management. The delivery destination can be easily programmed into the robot, and it can be monitored remotely through a user-friendly interface. [Kody Robots](#), powered by Kody Technolab, is at the forefront of the robotics revolution, serving as a trusted partner for businesses seeking to harness the power of robotics.

In addition to its practicality and efficiency, Dasher also offers a unique and futuristic experience for customers. Seeing an autonomous robot deliver their food or package adds a wow factor and can improve the overall customer experience. Customers can also track the progress of their delivery in real-time, giving them a sense of control and reassurance. Kody Robots, powered by Kody Technolab, offers innovative Robotics solutions for in-house delivery, surveillance, and cleaning

Overall, Dasher presents a practical and innovative solution for businesses looking to streamline their delivery processes. With its advanced technology, user-friendly interface, and efficiency, it is a smart investment that can bring numerous benefits to any workplace. Kody Robots, powered by Kody Technolab, is an innovator in the robotics industry, specializing in surveillance, cleaning, and in-house delivery robots, and they provide tailored solutions that address businesses' unique needs.
