A black Dell printer is visible on the desk next to her. The printer has a white paper sheet coming out of it.

Below listed are the common issues you may face with your printer:

- The printer is printing blank or black pages.
- There is ink cartridge issue on your printer.
- Configuration issues with your printer.
- Software related problem with the printer.
- There is a paper-jamming issue.
- The printer is not printing.
- Issues while connecting printer.
- Printing is taking too long.
- The printer is giving bad quality prints.

-

You can get rid of the minor issues at your end while for the major issues which are out of your technical knowledge can be passed onto us at our **Dell Printer Support Number** for their solution.

You can try solving the issues on your own by checking a few things mentioned below:

- If you are getting black or blank pages while printing, the possible cause can be the wrong setting of the ink cartridge. Make sure that the right cartridge is in the right place and is full of ink otherwise replace it with a new one.
- You need to install the appropriate driver for your printer to solve the software related problem. If the driver is corrupted, you have to reinstall it.
- If your printer is not printing, make sure it is properly connected through cables and that the Wi-Fi is enabled and the printer is connected to the network as well otherwise you will not be able to print.

-

- The printer should be properly configured to get the best quality prints. Also, check your printer settings are correct as incorrect settings will lead to poor quality prints. Also, the paper you are using should be of adequate quality. If you are getting discolored prints, you can go for changing the ink cartridge.
- Check that the paper is aligned properly before printing as not aligning the paper properly can cause paper jams. Also, do not overfill the paper stack to avoid paper jams.
