

How Does A Diamond's Cut Affect Its Price?

Diamond pricing involves a very complex mechanism. It revolves around different factors. Diamonds are graded based on four basic qualities, i.e. cut, carat, clarity, and color. Together these characteristics are known as the "Four C's" of diamonds. A diamond cut does not define the shape of a diamond, such as a marquise cut or a pear cut.

Cut refers to the proportions, angles, brilliance, symmetrical facets, scintillation, and finishing details of the diamond. It is the way a diamond is cut as well as polished. Whether the supplier is offering the [diamonds for sale](#) or not, the price of it highly depends on its cut quality. It also defines how well proportioned it is that including its depth and symmetry.

A slight modification of the angle during cutting between the two facets changes the light path through the crystal, which highly affects its clarity as well as brilliance. The beauty of a diamond highly depends on the cut than any other factor. Regardless of your reason behind buying a diamond, it is always better to stay informed. This is because the cut of the diamond you will purchase can affect the price by more than 30%. To know more about how the cut affects the price, let's have a look at some popular types of diamond cuts.

Round brilliant cut:-

The Round Brilliant Cut is a type that includes 57 facets and can produce the ultimate brilliance and sparkle amongst the different cutting styles. Such type of diamond cut has

remained the most popular type since the twentieth century. Such type of diamond cut is by far the most expensive. They are demanded more than any other cut.

Princess-Cut Diamond:-

Princess-Cut Diamond is the second most popular type of diamond cut. Such type of diamond cut features a squarish appearance. They also offer a level of brilliance that is comparable to the round cut. In comparison to other shapes, these diamond cut has the lowest price per carat.

During polishing the cutting style of such diamond cuts makes very efficient use of the rough diamond, due to which they result in less material wastage. These cut diamonds are square-shaped. But due to a larger yield from the diamond rough, the price of these cut diamonds is lower than a round cut.

Emerald Step Cut:-

Emerald-Cut Diamonds are a type with large open facets. These cuts are polished with the use of a "step-cut" technique. Such type of cut diamonds displays a hall of mirrors effect because of which they give a distinctive appearance. It is considered better to choose an Emerald-Cut that has a length-to-width ratio between 1.4 and 1.5. Such cut showcases a better size than any other type.

Pear-Cut Diamond:-

Pear-Cut Diamonds are also known as teardrop diamonds. These are a popular type of diamond cut for drop earrings and pendants. These cut diamonds are affordable as well as an excellent alternative to Round-Cut Diamonds. They are often eye-catching and are considered best for engagement rings. While choosing the best for you from diamonds for sale it is better to be aware of the above features of different cut diamonds. This makes the buying process easy and also helps to buy the best one as per your budget.
