IVF involves The First Choice IVF and Cosmetology Hospital in Vesu is among the top among the IVF clinics in Surat that employ Virto fertiliser, however there are a number of them. Their hospital is located in Vesu, one of Surat's finest areas, and they have been offering the best services for the past 30 years.

Who might go for IVF?

First Choice IVF and [Cosmetology](#) Hospital in Vesu states that women under the age of 43 who have been trying to conceive through regular, unprotected sexual activity for two years, or who have had 12 rounds of artificial insemination, at least six of which using a technique, should be given the option of IVF.

When executing IVF, the top institution, Vesu, adheres to these six key procedures:

In order to stop your menstrual cycle and encourage the production of more than one egg at a time from your ovaries, medication is used to suppress your regular cycle.

To monitor the development of the eggs, an ultrasound scan is performed, and medication is given to help them mature.

In order to collect the eggs, a needle must first be inserted into your vagina and then into your ovaries.

What is the likelihood of success given Vesu's original decision?

The likelihood that [IVF](#) will be effective depends on the patient's age and the cause of her infertility (if it is known).

If IVF is performed when the patient is younger, there is a chance that the pregnancy will be successful; however, if IVF is performed when the patient is older than 40, problems may arise and there is a much lower chance that the pregnancy will be successful.
