

Why is ADR Often Necessary in Post-Production?

When it comes to creating a movie for television or big screen, achieving a pristine audio quality is paramount. ADR (Automated Dialogue Replacement) plays a crucial role in ensuring the highest-quality sound for films and television projects. ADR, also known as “looping,” involves re-recording dialogue in a studio setting to replace or enhance the original production sound. [ADR record](#) is often necessary to address various challenges faced during the filming process and achieve a seamless audio experience.
