

# Why ATS Dry Ice Blasting is the Best Eco-Friendly Cleaning Solution in Riyadh,

Business owners and industries looking for an effective, eco-friendly cleaning solution in Riyadh, Saudi Arabia need to consider **dry ice blasting**. Traditional cleaning methods, such as sandblasting and chemical cleaning, often leave behind toxic residues, damage surfaces, and create secondary waste that requires further cleanup. [Advanced Tech Solutions \(ATS\)](#) offers a superior alternative—a cleaning solution that is non-toxic, non-abrasive, and environmentally friendly.

## What is Dry Ice Blasting?

**Dry ice blasting** is an innovative cleaning method that uses compressed air to propel dry ice pellets onto surfaces, effectively removing contaminants without causing damage. When the dry ice hits the surface, it sublimates (turns directly from solid to gas), leaving no secondary waste. This makes it a perfect solution for industries that require precision cleaning without the hassle of additional cleanup.

**Advanced Tech Solutions' dry ice blasting** is your green choice! 🌿 Unlike other companies in Saudi Arabia, our technology uses non-toxic recycled CO<sub>2</sub> pellets, leaving no secondary waste or chemical residues. It's perfect for complex surfaces and safer for the environment. **ATS** is the leading **Dry ice blasting service** provider. We perform all kinds of industrial cleaning with the latest technology with pressurized air cleaning to remove rough dirt, unwanted materials, and residue that will stick and stay with the plant equipment due to the environment and other factors of production. Dirt such as hardened soil and sand, oil, chemicals, etc are removed using our industrial cleaning services.

## Why Choose [Dry Ice Blasting in Riyadh, Saudi Arabia](#)?

### 1. Non-Toxic and Non-Abrasive Cleaning

Unlike sandblasting, which can erode surfaces, or chemical cleaning, which introduces hazardous substances, dry ice blasting is completely non-abrasive and non-toxic. It safely cleans sensitive machinery, electrical components, and delicate industrial equipment without causing wear and tear. This makes it an ideal choice for manufacturing, oil and gas, food processing, and pharmaceutical industries.

### 2. Zero Secondary Waste – A Cleaner, More Efficient Process

One of the major drawbacks of traditional cleaning methods is the mess they leave behind. Pressure washing creates contaminated water, and chemical cleaning leaves behind hazardous residues. In contrast, dry ice blasting leaves nothing behind—as soon as the dry ice particles hit the surface, they evaporate into gas. No water, no chemicals, no additional cleanup required!

### 3. Uses Recycled CO<sub>2</sub> – A Greener Alternative

Sustainability is a growing concern for industries in Saudi Arabia, and ATS is committed to providing an eco-friendly solution. Our dry ice blasting process uses recycled CO<sub>2</sub>, reducing environmental impact. Instead of contributing to pollution or excessive waste, this method utilizes existing CO<sub>2</sub>, making it a sustainable choice for industries that prioritize green initiatives.

#### **4. No Chemical Residues – Safe for the Environment and Employees**

Chemical-based cleaning solutions often introduce harmful residues that require additional cleaning steps, posing risks to both workers and the environment. ATS's dry ice blasting eliminates this issue by providing a chemical-free cleaning process. This means no risk of contamination in food processing plants, no toxic fumes in confined spaces, and a safer workplace for employees.

#### **5. Superior Cleaning for Complex Surfaces**

Industries in Riyadh, Saudi Arabia often deal with intricate machinery and hard-to-reach areas that traditional cleaning methods struggle to address. Dry ice blasting excels in precision cleaning, ensuring that even the most complex surfaces and delicate equipment are cleaned thoroughly without damage.

#### **Why Choose Advanced Tech Solutions?**

While many cleaning companies in Saudi Arabia still rely on outdated methods, ATS is leading the way with cutting-edge dry ice blasting technology. Our commitment to quality, efficiency, and sustainability makes us the best choice for businesses looking to upgrade their cleaning processes.

ATS is the leading [Dry ice blasting service](#) provider.
