

Training Within Industry

**SUPERVISOR
ACADEMY®**

TRAINING WITHIN INDUSTRY

Training Within Industry (TWI) is an off-the-shelf training package that develops essential leadership skills and enables supervisors to dramatically increase their performance. There are several TWI programs, each of them focused on developing one key supervisor skill. Through TWI training supervisors learn to:

- develop excellent jobs skills in their teams (TWI Job Instruction - TWI JI)
- improve methods & processes of the work performed in their area (TWI Job Methods - TWI JM)
- solve people-problems and motivating staff (TWI Job Relations - TWI JR)
- anticipate and avert safety risks in people and their work environment (TWI Job Safety - TWI JS)
- manage daily production in a way that sustainably improves results (TWI Production Management - TWI PM)
- do and lead rapid problem solving to prevent problem recurrence (TWI Problem Solving - TWI PS)

"Generally, work method variation can be traced back to faulty on-the-job training and follow-up"
