

User Experience and Satisfaction with Substance Use Behavioral Health Electronic Health Record System

As the use of electronic health records (EHRs) continues to increase in the field of behavioral health, it is important to assess the impact on user experience and satisfaction. EHR systems have become an essential tool for healthcare providers, allowing them to efficiently manage patient information and improve coordination of care. However, if these systems are not designed with a focus on user experience, they can actually hinder workflow and decrease user satisfaction. So, without further ado, let's dive into the world of EHR systems and their impact on user experience and satisfaction in substance use behavioral health settings.
