What is Augmented Reality (AR)?

Augmented Reality seamlessly blends digital content with the real world, creating immersive and interactive experiences. Unlike **Virtual Reality (VR)**, which places users in a fully digital environment, **AR enhances the real world** by overlaying information, graphics, and animations onto physical spaces. Whether it's a **virtual tour for a university, hospital, or property**, AR elevates user engagement and adds a new dimension to business operations.

Augmented Reality Developer Services by Walkthru

At **Walkthru**, we specialize in **custom AR solutions**, including:

1. Virtual Tour Services

- **3D virtual tour services** for real estate, education, and healthcare sectors
- **Walkthrough virtual tour** experiences for businesses
