

What is BEST SAP ERP Central Component (SAP ECC)?

SAP ERP Central Component (SAP ECC)

SAP ECC is typically implemented in medium and large-sized companies. It forms the foundation of SAP Business Suite, which also includes components such as SAP Customer Relationship Management and Supply Chain Management. SAP documentation officially changed from using the term module to using the term component when it moved from R/3 to SAP ECC. SAP ERP Central Component (SAP ECC)

Like most enterprise-level business applications, SAP ECC components can easily be integrated to work together. In general usage, both module and component refer to a part of the program that is independently developed to handle a targeted set of business processes. For example, processes such as procurement or accounting can be integrated to work together. ECC is composed of 10 functional core components and two technical components. It is slated to be replaced by S/4HANA by 2025.
