

Uncover the Truth About Fibroids and Cancer Risk

**USA
FIBROID
CENTERS**

**CAN
FIBROIDS BE
CANCEROUS?**

If you're wondering, "[Can fibroids be cancerous?](#)" you're not alone. Fibroids are typically benign (non-cancerous) tumors that grow in the uterus. However, it's important to be aware of rare cases where fibroids may become cancerous. At USA Fibroid Centers, we provide comprehensive care to help you understand and manage your fibroid symptoms. Our experts specialize in non-invasive treatments such as Uterine Fibroid Embolization (UFE), which can effectively reduce the size of fibroids and prevent complications. You don't have to suffer from

the uncertainty and discomfort of fibroids. Let us guide you toward the best treatment options available.
