Are you prepared for the approaching [MRCP PACES](#) test? Passing the MRCP(UK) Part 2 Clinical Examination is the third and last step towards becoming a proud member of the RCP, and for many, it's a difficult trip to make. Here, we'll provide you with tips on organising your study so you can pass the test on your first try.

## **What's Involved in MRCP PACES?**

The [MRCP PACES examination](#) is conducted in a clinical context and lasts for half a day. A hospital or a clinical skills centre could serve as this clinical setting. There are five stations and eight patient encounters in this objective organised clinical examination. Two impartial examiners will watch and assess the candidates' performance at each station.

The exam's main goal is to assess a candidate's proficiency in performing fundamental clinical tasks, including taking a patient's history, performing a physical examination, communicating, managing a clinical practice, and performing procedures. It is based on seven fundamental abilities and requires careful interactions.

## **How to Prepare for MRCP PACES Exam Preparation?**

It is advised to begin [MRCP exam preparation](#) three to six months in advance. Make a plan that addresses every key topic listed in the [MRCP PACES](#) exam syllabus. Follow the plan. To better grasp exam expectations and develop clinical skills, include patient assessment into your daily practice, ask seniors for feedback, participate in PACES instruction, and use internet tools and videos. Both the clinical and communication stations should be your main priorities. In stations 1 and 4, candidates participate in two 10-minute communication interactions to assess their communication skills.

Candidates are expected to perform structured histories, assess patients, discuss likely diagnosis and treatment options, and respond to any queries or concerns at the clinical stations (stations 2 and 5).

The PACES exam necessitates a distinct method to prepare because it evaluates clinical abilities through patient encounters. If you feel that you performed poorly in a previous encounter, it's crucial to keep in mind that you can still pass the exam and that it won't have an impact on your grades in the subsequent encounter.
