New online casino slots that can be customized

32Red, an online casino, introduced a new slot game that may revolutionize the online slot industry. Newly developed slot technology will allow players to create and customize their own slot machines. Slot games are based on traditional five reel slot templates, but each player can add their own photos, music, and slot features to the game.
The new game is appropriately called "My Slot," allowing players to begin customizing their personal games when they first start playing. If the player doesn't want any of the first 13 default symbols offered, simply click on the image to replace it with the symbols on his or her hard drive. As you continue, you can also change the music and background color of "My Slot" to allow each player to have their own personal slot machine in minutes. 슬롯머신

According to Mark Quayle, 32Red's head of marketing, 32Red already offers 150 types of slot games, but with the addition of "My Slot" technology, it will offer an almost infinite number of slot machines.

"The launch of 'My Slot' will mean that the number of different slot machines available in the 32 Red Casino will be limited only by the player's imagination and creativity."
