

# Oxycodone And Ibuprofen: Can You Take Them Together At The Same Time

<https://mayomed.com/oxycodone-and-ibuprofen/>

Oxycodone is a narcotic drug that is used to relieve pain, whereas Ibuprofen is a non-steroidal drug that is used to reduce swelling and inflammation at the source of pain. Here we will discuss how these two different mechanisms of drugs, [Oxycodone](#) and Ibuprofen, work together for specific pain relief. Also, these medicines are separately effective for pain relief. Therefore, this article explains why they are combined and how to use this duo optimally.
