

### **Magnetic Fields**

From: Chuck Darling February 27, 2025

Magnetic Fields.

The Earth's magnetic field is shifting and weakening...

This is a problem, since Earth's Magnetosphere protects life on earth from powerful Cosmic Rays from the Sun

and from Novas, SuperNovas and Black Holes in space.

(Yes, Black Holes emit radiation from their magnetic poles... if their poles are pointed at Earth, then we get a flood of Cosmic Rays...)

**Magnetic Fields have Biological effects.** 

When Solar Wind activity drops, as when sunspots rotate out of sight on the Sun, (Abrupt Low Frequency EMF !!!!!) then people with heart conditions can die.

Water itself is repelled by Magnetic fields, You can test this yourself with a thin stream of water and a strong magnet.

Grapes are repelled by Magnetic fields.

Scientists have levitated living frogs with very strong Magnetic Fields.

MRI scanners use extremely strong Magnetic Fields. You must keep metallic objects away from a MRI scanner.

# How dangerous are magnetic items near an MRI magnet?

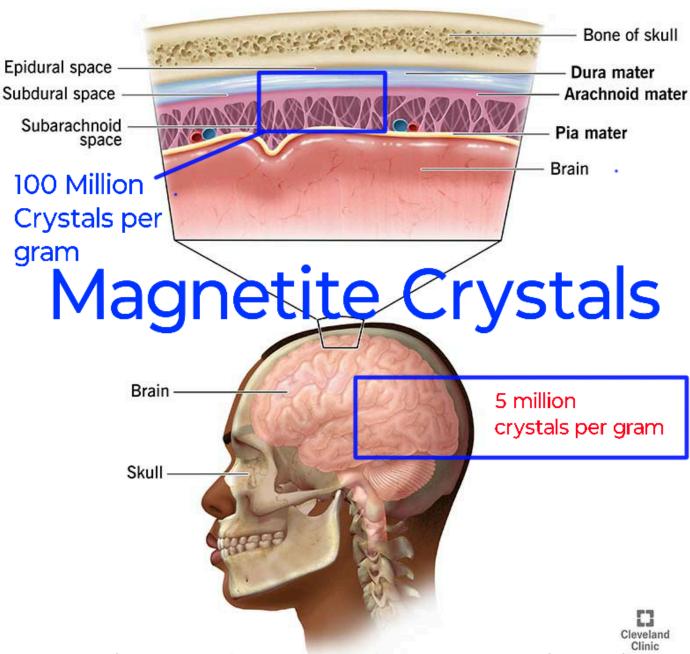

Those poor 911 first responders...

Iron microspheres in their lungs ...

and induction vape cigarette users...

(The Stainless Steel disappears...)

### Meninges

The Pia Matter forms part of the Blood-Brain Barrier<sup>21</sup>

- Infections?
- Alzheimer's

It is known that the Brain contains 7 billion magnetite crystals.

### **BIG PROBLEM!!!**

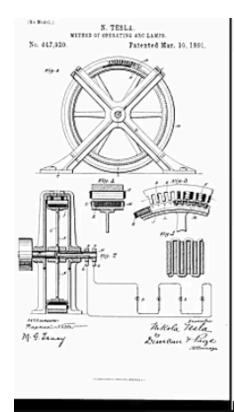

We know that Brain Cancers and Leukemias are greatly increased in Strong 60 Hz fields!
There are 7 Billion Magnetite Crystals in the Brain!
And they get yanked around by
Magnetic Fields!!!!!
Like Car Chargers, Electric Cars, and MRIs

We must seriously consider this before Tripling our Electrical Supply!

(Perhaps Nikola Tesla's 10,000 Hz power might be more BIOCOMPATIBLE...)

## Houston... We have a PROBLEM...!

- Pia Mater -Wiki
- Magnetite biomineralization in the human brain.
- Magnetite in the heart, liver, and spleen

#### UNITED STATES PATENT OFFICE.

NIKOLA TEMA, OF NEW YORK, N. Y.

#### VETHOD OF OPERATING ARC LAMPS

SPECIFICATION Street, part of Letters Palent No. 485,000, dated March 10, 1810

To all veloces of many remoters:
But it known that f. Nikota Yikata, a saleject of the Emperor of Americalitagary, reshing at New York, in the monty and State at

of New York, have intented ownian new an usef ellimporteness in Nethedest Operatio Are Laurya, of which the beforeing in a spec Section.

This investigate consists in an improve

organists.

It has new income a concuser proeffer to rea as hamps by alternating or galaxing as 15 died applied from continuous current to be a died applied from continuous neutra to the as a diperious in such systems rather in the fact that the arm until a presentation of each extraction of extremel, but such any elevatoristic or oscillating as adjustmentation as constituting as adjustmentation as constituting as adjustmentation or constituting as adjustmentation or constituting as adjustmentation and designed and continuous and adjustmentation and adjustment

heating and cooling and consequent eigenpa does not contraction of the passess matter to-colleg the new which corresponds with the convenient is absuling it and predicting quiet not consultly outling integer by theretology part and consultiy outling integer by theretology, not pushed they the remired producing heat or such as action that the rate of the whereto-such as action that the rate of the where-

noise approximately equals or encode that y which is protectly expected as the links of antillion. For example, I may make promotion which produces ten thousand or nowe abounations of excess per around. In such a case the periodical heating and cooling of the use as would accept with such problem as to produce little or to promptible of effect upon the sur.

think on the promptibility threet upon this term. These me is numbered ways in which the Third was a number of ways in which the Third was a number of the third in the Third of anothine, but probably the most as allowed to be and personal in by the mes of an allowant income to one allowant in the term of an allowant income to the probability one allowant in the term of the te

medican. Fig. 1 is an enlarged stew, in whice charation, of a part of the metal-lat. Fig. 4 is yo an exhapped socious dictal of the agreetor t and field. Fig. 5 is a defail section of the field-enginess sublitting the planet whether. A is an annular magnitude from according

A is an assented magnetist from a represent the control of the control of the control of the first C, upon which the median resident of the C, upon which the median resident with a large transfer of projections or pole pieces D. Them may be forward or applied the a resident of ways and the control of the control of the transfer of the forward or applied to a resident of ways—as, for example, by milling maintering posterios.

Owing no the very large number and small, Owing no the very large number and small, and the small interaction of the small state, I apply the stating or hold sole by a lading as installed endoster F is large (from the pophorenan shown in Fig. 8; many ing said wise recovered the associate to from a many layers in desired. In this way the point-places in OCI to enterpoind with abstractory expecta-

eather from the case of correspondent bill, measured in beautings in the lowesters in . This against excitive a ring 2, turned down, entering at the case of the 2, turned down, entering at the case of the state of

in the current, and managemently the anadom of ributations per said of these of the generous and state of the parameter and state of the same up to see beyond ten through and at alcome behavior for the state of a discussion behavior for the said of the said

Another advantage principly inventing as above not bright the number of alternations is that the aver not some life that produced by a medianous current, in that it is more persistent, ordering the fact that the line interval interval mediant cannot use in an email that it the general number output of the product of the control of the

Estime—The method of shading or producing into Gills the sound modified by are lange may a piled with or operated by an abtenuing or pubsing overest by investing the rate of such abtenuations or pulsarious up to that of the Tmil of autolium, as and fortile.

PRANK S. MURPEN,

Brain Magnetite Crystal Problem is like 1899 Arc Lamp Noise!

How Nikola Tesla's Generator Created 10,000
Hz AC Current! | AC Generator Working | AC
Generator Higher Frequency, less Crystal Motion

Nikola Tesla

With less time to accellerate the Pia Mater

per power cycle, INERTIA will hold the crystals relatively motionless, causing less tissue damage, less damage to the Blood Brain Barrier, and thus less Dementia, resulting in tremendous health care savings..!

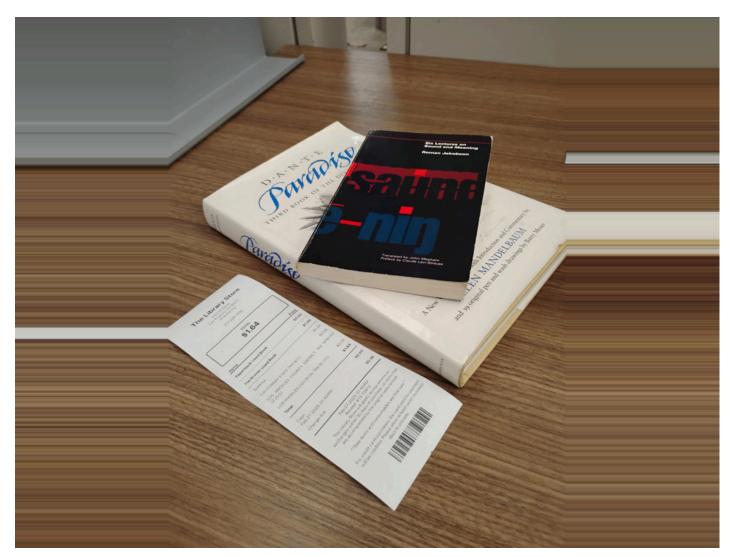

There would also be a cost-saving reduction in Brain and Bone Cancers, and Leukemias!

Use High Frequency Power for new Al power plants !!!!!

Chipmakers: you need to work on High frequency Power Supplies !!!

Classic Bluetooth transmit power is 10 mW

### 100 mW in Bluetooth 5

 prolonged and frequent use of Bluetooth headphones may be associated with an increased risk of developing thyroid nodules, potentially linked to the cumulative effects of NIR emitted by the headphones on the thyroid gland.

The typical transmit range for classic Bluetooth earbuds is around 30 feet (10 meters), with most consumer electronics falling under the "Class 2" Bluetooth category which provides this range; however, newer Bluetooth 5.0 technology can significantly extend this distance up to 800 feet depending on the device and environmental factors like obstacles and interference.

## Chuck's Adventure
