CRACKER : TEAM R2R

PLATFORM : VST/VST3/AAX(MOD)

LANGUAGE : ENGLISH

PROTECTION : WIBU/CODEMETER/

AXPROTECTOR/WUPI

A witch says,

Happy Halloween!

As some of you already know, the

Gorilla Engine (developed by UJAM) has

an option to protect with WIBU/CodeMeter.

This Rhodes plugin is one of them.

Like always, we unpacked the code

nice from the evil AxProtector. No

emulation is required because it does

not use WIBU CoreAPI. It runs lovely

like developing build without any

garbages.

We feel very sorry for not

including the cute Gorilla Manager

because we accidentally killed it.

We hate that useless kong ;(

Kong Count : 1
