

# How to Choose Between Tapentadol vs Oxycodone

Click Now: <https://mediclox.com/tapentadol-vs-oxycodone/>

[Oxycodone](#) and [Tapentadol](#) are two well-known drugs that are used to treat moderate to severe pain. One special dual-action analgesic, tapentadol, acts by blocking and targeting opioid receptors. A well-known opioid that has been relied upon for many years, oxycodone provides strong pain relief by attaching to particular brain receptors and changing how pain is perceived.
