

Valorant Injection Failing (No Menu)

1. Open Windows Settings:

Press the Windows key + I to open Settings.

2. Go to Update & Security:

In the Settings window, select **Update & Security**.

3. View Update History:

In the **Windows Update** section, click on **View update history**.

4. Uninstall the Specific Updates:

Scroll down and click on **Uninstall updates**.

In the list of updates, locate and select the following updates:

- **KB5049981/KB5051974** (Windows 10 Security Update)
 - **KB5049622** and/or **KB5050009** (Windows 11 Updates)
- Click **Uninstall** for each update.

Valorant injection still failed (only required when unable to install the necessary updates)

Download the ISO here: https://archive.org/download/win-11-23h2/Win11_23H2_English_x64.iso

Note: Although the ISO mentions that all files will be deleted, this is not the case. A Windows.old folder will be created on your C: drive, which will store your previous files for easy recovery so that no files are deleted.

Note: After downloading the ISO file, make sure to uninstall the specified updates and pause all future updates. **Info:** If you're on Windows 10 the ISO file will work perfectly so no worries.
