One of several bundles of Salesforce products and services, each geared toward a different set of business needs. All Salesforce editions share the look and feel, but they vary by feature, . Start Learning Today · Expert Instuctors · ,+ Online Courses · Improve Your SkillsCourses: Development, IT & Software, Business, Design, Office Productivity. Jul 16, · Have you ever wanted to view an uploaded PDF file in Salesforce, on a Lightning page? This use case came up for me during piano practice. I really wanted to see a PDF with . Jul 16, · Have you ever wanted to view an uploaded PDF file in Salesforce, on a Lightning page? This use case came up for me during piano practice. I really wanted to see a PDF with a score and play the related music through a YouTube component on the same page. Jun 5, · How to Merge PDFs and Display Them on the UI in Salesforce? Objectives: After reading this blog, you'll be able to: Understand the needs of using a JavaScript library to merge PDFs. Load and utilize a JavaScript library like PDF-LIB to merge PDF files on the client side. Create and configure a Lightning Component (LWC) to display merged PDFs. Sep 5, · You need to include the jsPDF library in your Lightning Component. Since Salesforce does not support direct npm package management in LWC, you'll need to download jsPDF and upload it as a static resource. Download the jsPDF library from the official jsPDF GitHub repository; Go to Salesforce Setup and search for "Static Resources.". Oct 25, · In this post, we'll explore how to use jsPDF, a popular JavaScript library, within Lightning Components (LWC) to generate PDFs directly from your Salesforce application. What is jsPDF? jsPDF is a client-side JavaScript library that allows you to generate PDF documents in the browser. Apr 9, · Generating PDFs in Salesforce with charts, images and textual content is one of the hardest tasks to achieve. I am sure you searched a lot for native solution but at this point we don't have. May 16, · I'm new to Salesforce development and currently try to render a PDF that has been generated with jsPDF in a modal (i.e., I managed to generate PDFs from an LWC using jsPDF, yet I'd like to render it using a PDF viewer).
