

Step-by-Step Garage Door Installation Guide

Step 1: Prepare the Installation Area

Clear out any obstacles near the garage door opening. Use a level to check if the floor and walls are even, ensuring smooth installation.

Step 2: Install the Door Panels

- Start by placing the bottom panel in the garage door frame.
- Secure it with hinges and brackets.
- Stack and align the next panels one by one, fastening them with screws.

Step 3: Attach the Tracks

- Install the vertical tracks on both sides of the door.
- Ensure they are aligned properly before securing them.

- Attach the horizontal tracks to guide the door's movement.

Step 4: Set Up the Springs and Cables

- Carefully install the torsion springs above the door.
- Connect the lift cables to balance the weight of the door.
- Tighten the springs evenly to ensure smooth operation.

Step 5: Install the Garage Door Opener (Optional but recommended)

- Mount the garage door opener securely on the ceiling.
- Connect it to the door using the drive mechanism.
- Test the opener to ensure smooth opening and closing.

Step 6: Test the Door for Proper Functionality

- Slowly open and close the door manually to check alignment.
- Adjust any misaligned tracks or springs.
- Secure all bolts and screws to prevent movement.
