 - **Latest Technology:** From FUE to the DHR+ Sapphire Technique, we employ the most advanced methods to ensure optimal outcomes.
-

Hair Transplant Techniques We Offer

At Enhanced Med Clinics, we provide a variety of techniques to address different hair loss patterns and preferences:

1. FUE (Follicular Unit Extraction)

- **Ideal for:** Minimal scarring and natural results.
- **How it works:** Individual hair follicles are extracted from the donor area and transplanted into the balding regions.
- **Benefits:** Faster recovery, natural appearance, and versatility in hair styling.

2. FUT (Follicular Unit Transplantation)

- **Ideal for:** Extensive hair loss and maximum graft availability.
- **How it works:** A strip of skin with healthy hair follicles is removed, divided into grafts, and transplanted.
- **Benefits:** High graft yield in a single session and cost-effectiveness.

3. DHR+ Sapphire Technique

- **Ideal for:** Precision and higher graft survival rates.
- **How it works:** This advanced method uses specialized tools for perfect graft placement, ensuring density and natural-looking results.
- **Benefits:** Near-perfect graft survival rate, minimal recovery time, and enhanced results.
